

Flex Launcher Editor Documentation

2026 02 22

Vibe coded out a working prototype for Flex Launcher Editor

Name: Chris Wolfe

Below are my plans in my Obsidian text editor for the documentation project.

Documentation for: Flex Launcher Editor

Documentation plan - in H's below

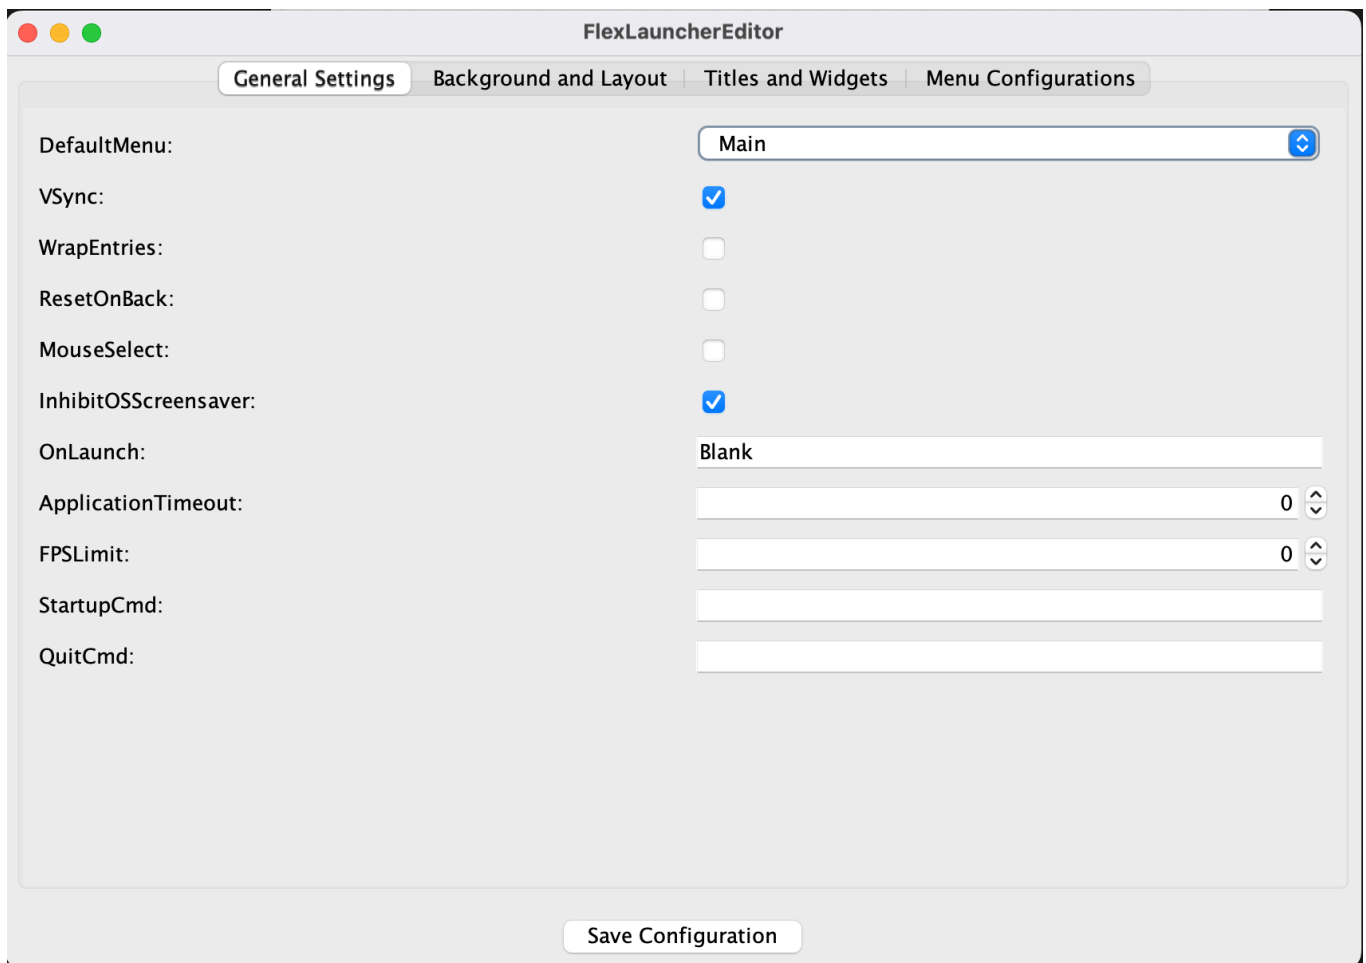

Introduction

Goals: Functional introduction to the intended use of this software (as if it were to be used by anyone who downloaded Flex Launcher and are now opening this as documentation, say in a readme on github for the project.) I know that this project already has a successor but flex launcher was downloaded and installed by me because the successor to flex launcher is not "ready" according to the creator, complexlogic. Flex Launcher will be referred to consistently as "Flex Launcher" and Flex Launcher Editor will be referred to consistently as "Flex Launcher Editor" throughout all of this documentation.

General Settings

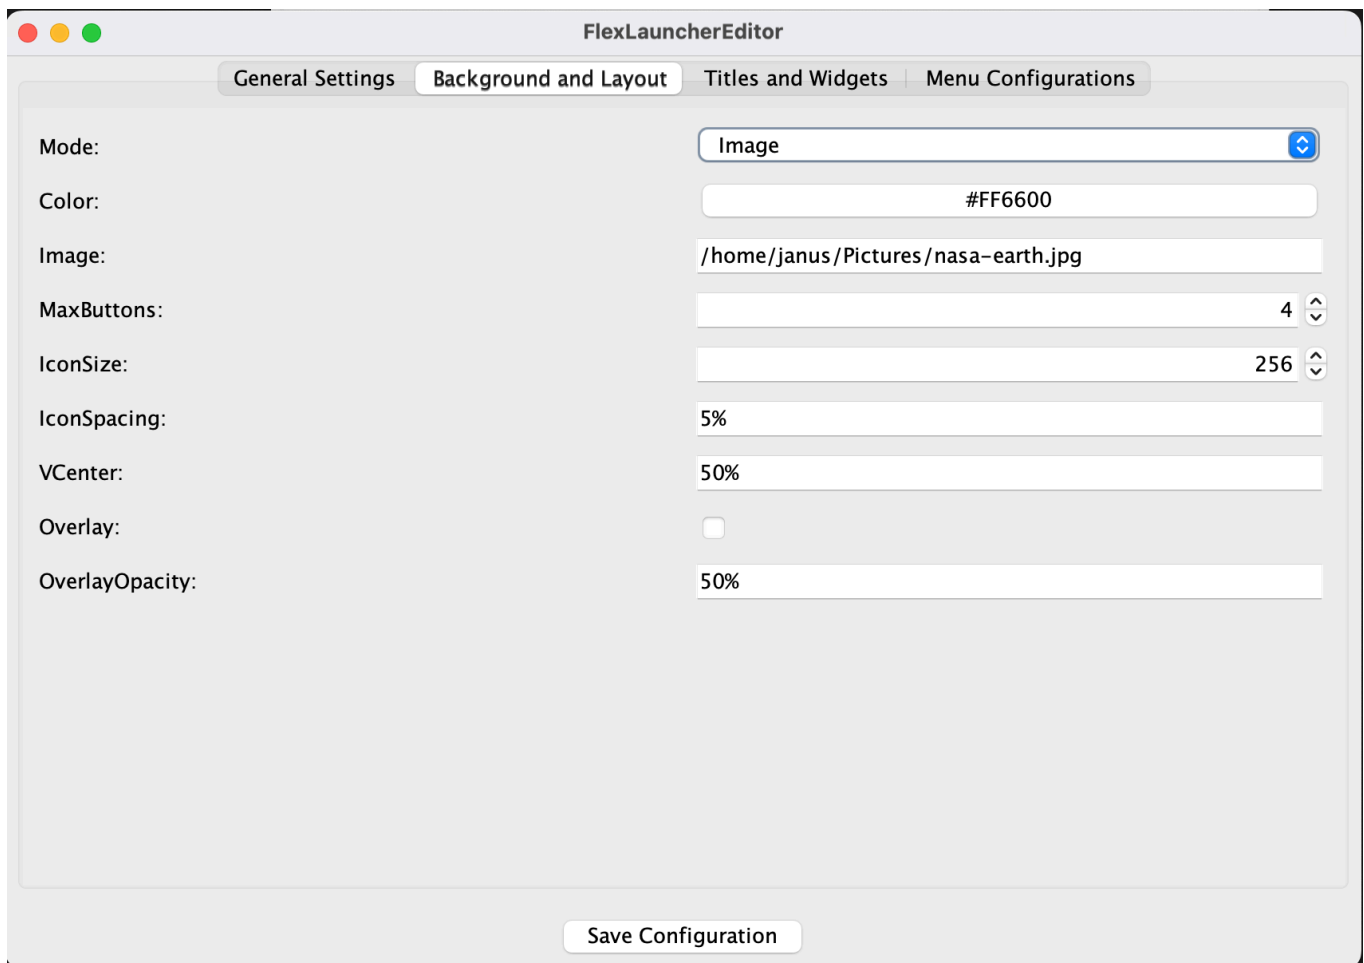

☐ TODO: something else

- List out each setting with a quick word on functionality. Flex Launcher has existing documentation which will be borrowed heavily from here, but I'll reframe it into the interface that Java renders.

Background and Layout

- ☐ TODO: something
- ☐ Color has a color picker setting, that may be more interesting to put that into words.

Titles and Widgets

- ☐ TODO: Rename this section. Vibe coding is not particularly productive, and I still can't afford a new GPU. Maybe if I can get Sam Altman to pay for a GPU, then I can afford one.

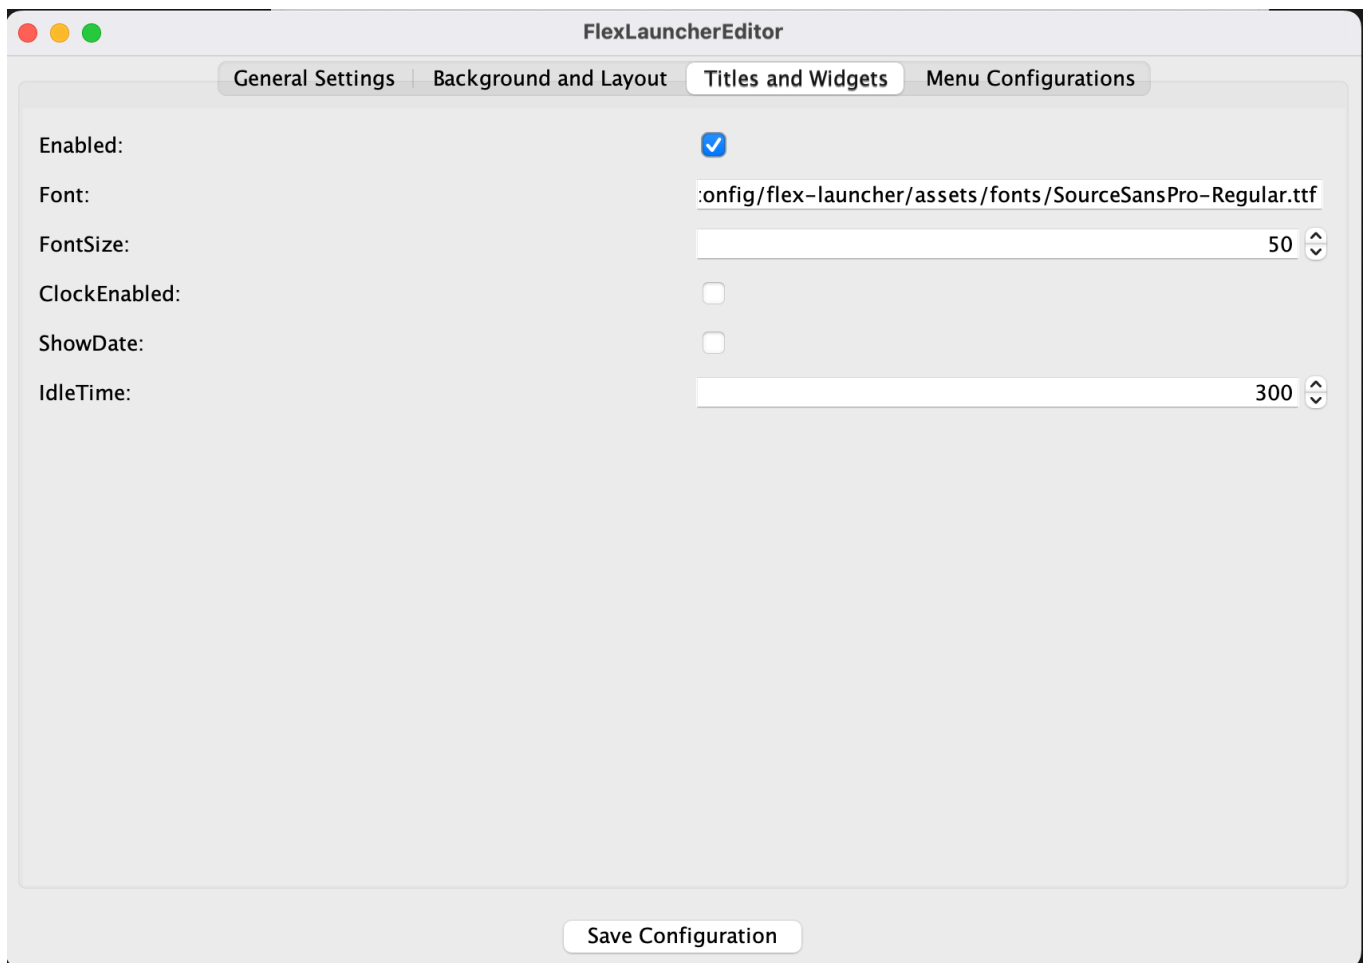

Subsections -

Titles

Fonts

Clock

Funnily enough, there is an enabled button that is... enabled. lol. What is enabled?!

Menu Configurations and Submenus

- ☐ TODO: Test and make sure that menus are created appropriately
- ☐ Delete General, background, layout, etc submenus in the available menus... not actually in the config file and not part of Flex Launcher.
