

Scrum Diagram Assignment

Diagram of Scrum assignment - C Wolfe

Random image of scrum I found online through google image search - [source](#)

vs Scrum What is scrum? diagram from [source](#)

What is Missing?

- Lack of focus on the scrum team and three key roles of Dev/Scrum manager/Product Owner
- Less focus on the product goal and backlog refinement, more simply on the product vision (similar, but I'd argue not the same)

- Increment is missing entirely, instead there is deployment of the product
- The website source defines more product backlog work as being necessary than is detailed in the diagram

What is added?

- Looks like some meetings at each stage of implementation, review, and retrospect. The diagram isn't exactly clear on that.

What is emphasized?

- Both the source I found and the scrum source document emphasize the need for a daily scrum meeting.
- Both have Planning, Review, Retrospective, and Deployment defined as integral parts of scrum.
